Subject: DuPont Laporte Update, November 19, 2014

Investigation of the accident continues. The building is not clear for final inspection. The entry team identified two elevated areas of methyl mercaptan. Due to the elevated readings, DuPont developed a revised plan to try and reduce the levels in the areas identified. The plan will be executed tomorrow with re-entry for final inspection if issues resolved.

The OSC met with CSB to share contact information and discuss site information sharing.
